

1. Data Overview

Size: The dataset consists of 207 rows in total (including 1 header row and 206 data rows for countries/territories) and 6 columns.

Data Sources: Historical baselines are sourced from the World Bank, combined with international tourism statistics and predictive models for recent years.

Context/Background: The dataset tracks international tourist arrivals to monitor the recovery and growth trends of global tourism over recent years (2022, 2023) and provides forecasts for 2024 against historical benchmarks.

2. Data Cleaning

Identify missing values and decide how to handle these missing values:

Some countries contained missing values for certain tourism indicators. These values were retained because they may represent unavailable or unreported data rather than data entry errors. Completely blank rows were removed from the dataset.

Identify any duplicate rows and remove duplicate rows if necessary:

No duplicate rows were identified in the dataset.

3. Descriptive Statistics

(The full descriptive statistics results are in the Excel file.)

Minimum	5.9	Minimum	3.73	Minimum	11.66
Maximum	89.4	Maximum	100	Maximum	79.4

Insight 1

The 2023 data shows that India (approximately 66.50 million arrivals) and the United States (around 42.00 million arrivals) dominated the global tourism landscape, while China dropped significantly to the bottom of the rankings with only around 6.00 million arrivals. This large gap reflects the early tourism boom in South Asia in contrast to the temporary slowdown of the Chinese market due to its later reopening after the pandemic (COVID 19). As a result, many global travel businesses in 2023 had to redirect resources and flight routes toward South Asia to capture this rapidly growing tourist demand.

Insight 2

In 2024, the situation changed dramatically as the United States (79.00 million arrivals) and China (66.00 million arrivals) regained their positions as major tourism powers, far surpassing the third-ranked country, Brazil (45.00 million arrivals). This remarkable comeback especially China's elevenfold growth highlights the strong impact of visa policy relaxation and the recovery of key international flight networks. Consequently, airlines and tourism investors were required to rapidly adjust their strategies and refocus resources on these two massive markets to maximise profitability.

Conclusion

In conclusion, the analysis of the "Most Visited Countries" dataset revealed significant differences in international tourist arrivals across countries and years. Descriptive statistics and visualisations showed that major tourism markets such as the United States, China continue to play an important role in the global tourism industry. The findings also suggest that global tourism is experiencing strong recovery and growth, creating new opportunities for businesses, airlines, and tourism-related industries worldwide.
