

Size: The dataset consists of 207 rows in total (including 1 header row and 206 data rows for countries/territories) and 6 columns.

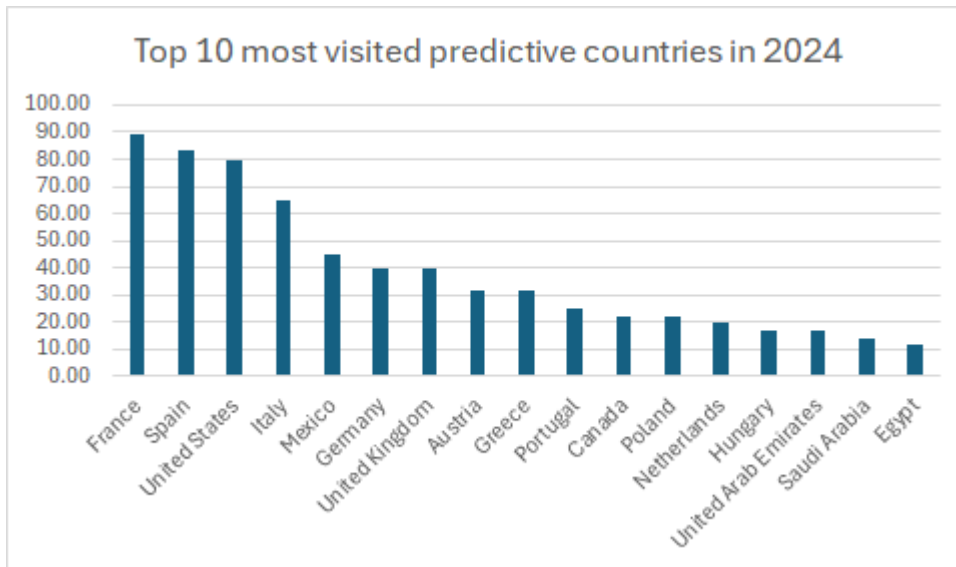

Context/Background:

Identify missing values and decide how to handle these missing values:

Identify any duplicate rows and remove duplicate rows if necessary:

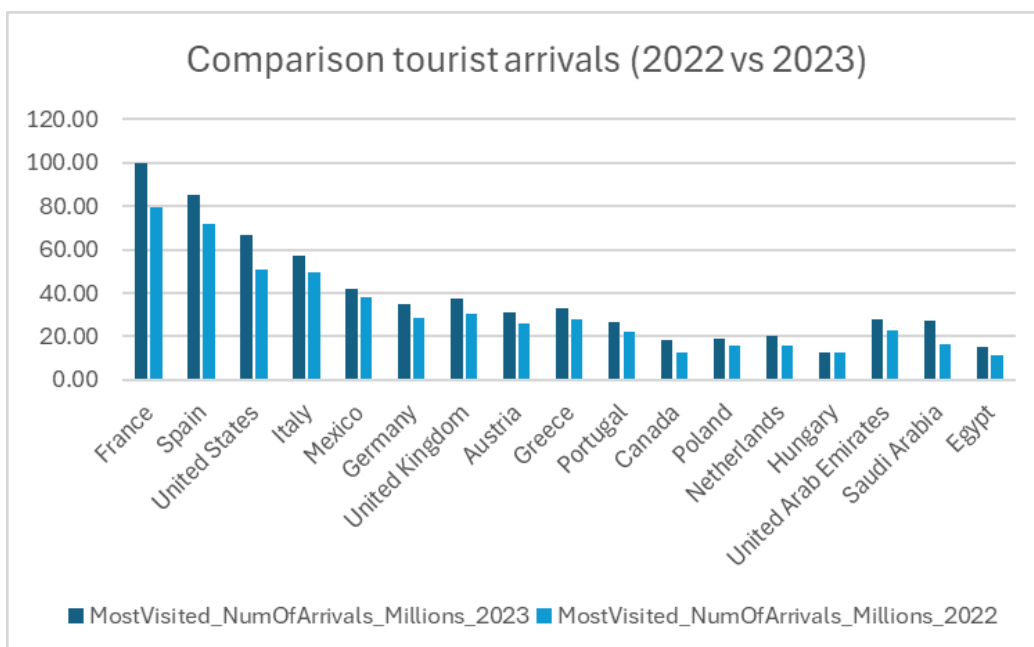

The dataset was also examined for duplicate entries to avoid repeated information. Duplicate records were removed to ensure each country would only appear once.

Insight 1

The chart shows that Europe dominates tourism, with France leading at nearly 90 million visitors. There is a huge gap between the top three countries (France, Spain, USA) and the rest, meaning a few big places take most of the tourists. Finally, the rise of Middle Eastern countries and the total lack of Asian countries show that global travel choices are changing fast.

Insight 2

The chart shows that tourist arrivals grew everywhere from 2022 to 2023, with France leading the recovery at 100 million visitors. This general growth proves that global travel bounced back strongly after pandemic restrictions were lifted. Finally, the noticeable rise in

Saudi Arabia and the UAE highlights how fast the Middle East is becoming a major rival to traditional Western destinations.

Conclusion

In conclusion, the data shows that global tourism recovered strongly from 2022 to 2023, and this growth is expected to continue into 2024. While Europe and the USA remain the top choices for travelers worldwide, the rapid rise of Middle Eastern destinations shows that the global travel market is slowly changing.
